Milford area

Water Levels 1966.

Lee,

Here is the statement of ground-water conditions in the Milford district.
It's like listening to the same old record.

Water levels in the Milford district declined from less than 1 foot to more than 2.5 feet between March 1965 and March 1966. These declines are generally about the same as have occurred during most of the years since 1952. Water levels in March 1966 were at the lowest March level since records began in about 1931.

Declines of more than 15 feet were recorded between March and August 1966.

Will you send me any readings on the levels in the reservoir that you have.

Woody
